

# FABRIC, CARPET & UPHOLSTERY REPAIR KIT INSTRUCTIONS

LTR102

*Always make a practice repair on a piece of scrap fabric before attempting the actual repair.*

## 1. PREPARE THE DAMAGE

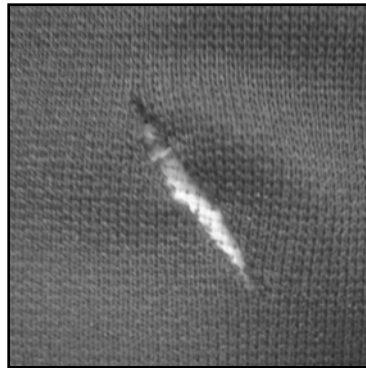

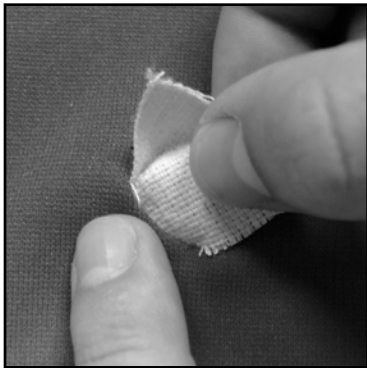

Clean the damaged area with household cleaner. Trim any loose threads. If padding is missing beneath the damaged area and the area is depressed, spread cotton balls or cotton batting evenly under the damage to build it back up.

## 2. MIX THE COLORS

Using the color match guide, pour the desired combination of colors into the empty mixing container. Shake the container 30-45 seconds to blend the fibers. Repeat as necessary until you have achieved your color match.

## 3. BACKING FABRIC

A piece of cloth in the kit is used as a support under the damaged spot. Very minor repairs do not require this backing support. Cut the backing fabric approx. 1/4 inch larger than the damage and insert it into and under the damage.

## 4. FILLING THE REPAIR AREA

Using the spatula, apply the clear dry adhesive onto the damaged spot. Fill the damage as evenly as possible, covering it entirely. **Rinse the spatula with clean water after completing this step. You will need a clean, dry spatula for step #5.** For best results, allow the filled area to dry before proceeding to the next step.

## 5. APPLYING THE FABRIC FIBERS

Apply a thin layer of clear dry adhesive to the area to be repaired, then rinse and dry the spatula. Using the clean spatula, scoop up a small amount of mixed fibers, and slowly and **evenly** slide them off onto the adhesive, using a finger. Do NOT touch the adhesive with the spatula. Cover the adhesive completely with the fabric fibers. Use the spatula to pack the fibers down into the damage, and to duplicate any patterns in the fabric. Allow several hours to dry before blowing off any excess fibers.

If the repair is not as blended as you would like, repeat step 3, and immediately apply the fabric fibers. Blow off excess fibers, and allow to dry.
